ACCCALC V12.0.0

Focus-First UI Organization Overhaul

Version 12.0.0 reorganizes AccCalc around a single rule: keep the main task visible first and make supporting detail available on demand.

Main Changes

- Added a shared page-menu pattern for lower-priority route support and orientation content.
- Reworked shared calculator pages so inputs and results stay primary.
- Rebuilt the homepage around next-step decisions and delayed discovery.
- Lightened study-page side references so lessons remain textbook-like and calmer.
- Added a Workpaper Studio focus mode for cleaner worksheet editing.

Focus-First Rules

Visible now

Inputs, main actions, main outputs, essential warnings, and current workflow state.

Discoverable later

Related tools, deeper study notes, orientation help, supporting references, and grouped browsing.

Shared Surfaces

- `CalculatorPageLayout.tsx` now keeps solving surfaces primary and routes support into disclosures and the page menu.

- `ContextualPageMenu.tsx` standardizes lower-priority page content across major tool pages.
- `HomePage.tsx` now emphasizes quick solve, quick scan, workpapers, continue study, and focused discovery.
- `StudyTopicPage.tsx` reduces side-reference dominance.
- `WorkpaperStudioPage.tsx` adds a student-friendly focus mode for editing.

Validation

- `npm test`
- `npm run build`
- bounded `npm run dev` probe
